A new TYPE and KIND of Automobile

Two brothers named Wright flew a power-kite off the bleak sands of Kitty Hawk, and gave to the world the airplane. Genius and daring, seeking new thrills, added hulls and keels to winged motors-and gave us hydroplane.

Today, the earthbound automobile takes on phantom wings—and you have the TERRAPLANE!

-and you have in Fasacrisch.

Not only a new model but a new kind of automobile, it springs full-powered from the independent, daring, Hudson-Essex engineering that has contributed more than 60 "first's" to automotive progress.

Because it skims the roadways of old terra firma with a fresh, tened it the TERRAPLANE.

Its new engineering principle is pneumounted power set free—with the highest ratio of power to weight ever achieved in a production car here or abroad. Its unit body-and-chasis construction is the first achievement of complete structural entity in any car.

In performance it out-starts, out-climbs, out-runs, out-curves and out-stays cars three times its weight and ten times its price.
